Interpreting an arterial blood gas (ABG) is a crucial skill for physicians, nurses, respiratory therapists, and other health care personnel. ABG interpretation is especially important in critically ill patients. The following six-step process helps ensure a complete interpretation of every ABG. In addition, you will find tables that list commonly encountered acid-base disorders.

Interpretation of Arterial Blood Gases (ABGs)

An arterial blood gas (ABG) test measures oxygen and carbon dioxide levels in your blood. It also measures your body's acid-base (pH) level, which is usually in balance when you're healthy. You may...

Arterial Blood Gas Test: Purpose, Procedure, Preparation

What is an Arterial Blood Gas (ABG)? An ABG is a blood test that measures the acidity, or pH, and the levels of oxygen (O2) and carbon dioxide (CO2) from an artery.² The test is used to check the function of the patient's lungs and how well they are able to move oxygen into the blood and remove carbon dioxide.

A blood gas test measures the amount of oxygen and carbon dioxide in the blood. It may also be used to determine the pH of the blood, or how acidic it is. The test is commonly known as a blood gas...

Blood Gas Test: Purpose, Procedure, and Side Effects

An arterial-blood gas test measures the amounts of arterial gases, such as oxygen and carbon dioxide. An ABG test requires that a small volume of blood be drawn from the radial artery with a syringe and a thin needle, but sometimes the femoral artery in the groin or another site is used. The blood can also be drawn from an arterial catheter. An ABG test measures the blood gas tension values of the arterial partial pressure of oxygen, and the arterial partial pressure of carbon dioxide, and the b

Arterial blood gas test - Wikipedia

When interpreting ABG results, it is essential to know what ABG values are considered 'normal'. From this baseline, you can then begin to recognise significant variations in a patient's results, which could indicate clinical deterioration. The first value is the pH, which measures how many hydrogen ions (H+) are in the sample.
