Chapter 3 Summaries: Chapter 3 talks about descriptive statistics with numerical measures. These measures consist of location and variability. The measures of locations are mean, median, mode, weighted mean, geometric mean, percentiles, and quartiles. If these measures are computed for data from a sample it's called sample statistics.

Chapter 3: Numerical Descriptions of Data 81 To understand how the different measures of center related to skewed or symmetric distributions, see figure #3.1.5. As you can see sometimes the mean is smaller than the median and mode, sometimes the mean is larger than the median and mode, and sometimes they are the same values.
