Solutions are groups of molecules that are mixed and evenly distributed in a system.

File Type PDF Elementary Science Mixtures And Solutions

Scientists say that solutions are homogenous systems. Everything in a solution is evenly spread out and thoroughly mixed. Heterogeneous mixtures have a little more of one thing (higher concentration) in one part of the system when compared to another.

What is the difference between a solution and a mixture? In chemistry a solution is actually a type of mixture. A solution is a mixture that is the same or uniform throughout. Think of the example of salt water. This is also called a "homogenous mixture." A mixture that is not a solution is not uniform.

Materials and Mixtures
Everything around us is made up of something, often a collection of different things. This module guides students as they begin to identify the different materials everyday objects are made of—specifically wood, plastic, metal and cloth—and how mixtures can be made by combining different objects and materials.
