### Geotechnical Engineering Earth Retaining Structures

Earth retaining structures (ERS) can also be classified according to the method required for their construction, i.e., fill construction or cut construction. Fill wall construction refers to a wall system in which the wall is constructed from the base of the wall up to the top, i.e., "bottom-up" construction.

### Geotechnical Engineering: Earth Retaining Structures

This online engineering PDF course, as a part of Geotechnical Engineering Series, covers basic theories, engineering analyses, and practical approaches for design of retaining structures. As a special case of an earthen slope with a truncated toe, earth retaining structure is used to hold back the earth and to maintain a vertical or near vertical elevation difference of the ground surface, for the benefit of saving space.

### Earth Retaining Structures and Excavation Support

Retaining Earth Structures, commonly referred to as retaining walls, are used to hold back earth and maintain a difference in the elevation of the ground surface. Retaining walls are typically used in areas where site constraints are limited and slopes are not feasible, such as sea walls and overpasses.
