HANKISON Membrane Air Dryers - Grainger Industrial Supply

Desiccant Dryers are used wherever compressed air or gas needs to be dried to a pressure dew point of -20° , -40° C or, optionally, -70° C. In addition to the specific application, the size of the Desiccant Dryer is primarily determined by the medium, flow rate, operating pressure, inlet temperature and the required pressure dew point.

power. Frequency controlled refrigeration dryers combine efficiency and power ... An optimised air flow reduces loss of pressured air to a minimum. Five filtration grades cover virtually all applications.

Hankison: Home

As the compressed air enters the PCM to air section of the heat exchanger, the PCM media absorbs heat for the airstream and begins to melt the PCM media at a constant temperature. When most of the PCM media has turned to liquid the refrigeration system cycles on to again cool down the PCM media turning it back into a solid.
