Americans are affected by movement disorders. It's a challenging reality—and one we cannot face alone.

Home - PMD Alliance

Parkinson's disease (PD) is called a movement disorder because of the tremors, slowing and stiffening movements it can cause, and these are the most obvious symptoms of the disease. But Parkinson's affects many systems in the body. Its symptoms are different from person to person and usually develop slowly over time.

The Parkinson's Disease and Movement Disorders Center at ...

Newcastle Upon Tyne, UK. The defining feature of parkinsonism is bradykinesia, or slowness with decrement and degradation of repetitive movements ("fatigue"). Subtle "bradykinesia" has been reported to occur in the "normal elderly" population, but this may reflect a non-specific slowness rather than bradykinesia as defined above. Parkinson's disease is the most common neurodegenerative cause of parkinsonism.
